How does this program evaluate each student's math abilities?

When starting, the student will complete an assessment that asks a small number of questions, each based on the answer to the previous questions. Once the assessment is completed, the program will have an in-depth picture of what topics the student has and hasn't mastered.

How does each student work to complete the requirements?

Each student will have a choice of topics to learn and practice problems using a colorful custom pie chart. Once topics are mastered each student will move on immediately to other subject areas. Students will be regularly reassessed on

choice

Once

will be

mastered topics, to ensure long-term retention.

What makes this program different from regular math instruction?

This research-based program allows educators to understand their student's knowledge and learning progress in depth, while providing individual support. Additionally, the program avoids multiple-choice questions, requires regular topic reassessment, allows each student to work at their own pace.

What are the eligibility requirements?

- Students working on 3rd to 12th grade math
- Children can start at any time but must complete the entire program once it is started
